

InterraIT EAI Practice

Enterprise Application Integration (EAI) is the solution for global organizations to streamline their processes to enhance Return on Investment (ROI) and reduce Total Cost of Ownership (TCO). The need of the hour is to apply domain knowledge to the middleware technologies and construct a roadmap for Enterprise Application Integration (EAI). Integration is the key to success for an enterprise to keep its critical business processes networked, both internally and externally.

InterraIT has a seamless proven record of providing flexible and scalable EAI solutions to Fortune 500 companies in integrating their business processes worldwide. The SEI-CMM Level 5 and ISO 9001:2000 processes of InterraIT are customized to ensure a quality solution.

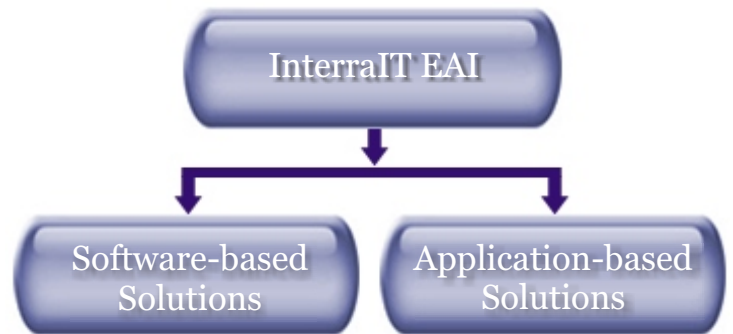

InterraIT has a large pool of EAI domain experts and technology specialists who with their collective experience cover the entire spectrum of EAI solution space including Application Integration, Database Linking, Data Warehousing and Common Virtual System. The EAI Application Development Framework and Business Process Application (BPA) integration platform used by InterraIT allows organizations to leverage their existing resources instead of investing in replacements.

InterraIT EAI solutions enable reuse of interfaces and components; therefore, reducing the overall effort to rewrite new interface and the cost of maintenance. InterraIT focuses not only on providing application integration, but its solutions are also packaged as Enterprise Information Integration (EII) solutions. The integration of business process applications in compliance with legacy system is supported by other forms of information integration services, like database, documentation and reporting services.

InterraIT EAI Services Portfolio snapshot

Owing to a wide range of experience across the EAI solution spectrum, InterraIT has emerged as the partner of choice for both EAI product companies as well as their customer organizations. InterraIT's internal EAI competency center with its dedicated resources of domain and technology experts cater to the client requirements from product development, implementation and support.

EAI Solution@InterraIT

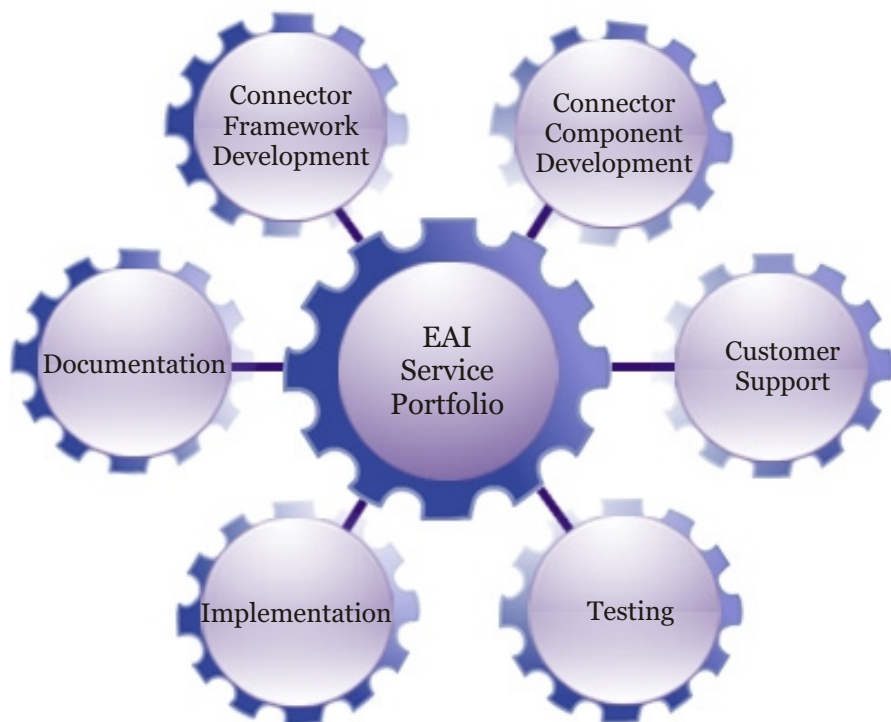

Why InterraIT ?

- > Increased ROI
- > Reduced costs, resources and time savings
 - Lower development and support cost
 - Extended offshore team
 - Wide range of domain & vertical expertise
- > Reduced development cycles
 - Maximize reusability
 - Minimize rework
 - Expertise across technologies and architecture
- > Improved customer services
- > Manageable integration framework
- > Flexible and scalable solutions
- > Separate in-house group focusing entirely on EAI

InterraIT's **value proposition** lies in the depth of expertise in enterprise solutions including SAP, Clarify, Tuxedo, Siebel, Vitria, Clarify, Remedy, Enterprise Portal that we bring to the table. This mapped with our industry expertise in **Healthcare, Financial Services, Telecom, Manufacturing** and **Publishing** enhance the ROI to our client using our EAI Solutions.

InterraIT EAI Practice

The collective EAI experience of the competency center span the entire EAI solution space including:

- > Application Integration
- > Database Linking
- > Data Warehousing
- > Common Virtual Systems

Technology spectrum: InterraIT has demonstrated its capability in working with different technologies like:

- > IBM Websphere MQ series
- > IBM Websphere MQ Integrator
- > IBM Websphere Business Integration Interchange server (WBICS)
- > IBM Websphere MQ Message Broker
- > TIBCO
- > Vitria BusinessWare 3.x & 4.x
- > Weblogic Application servers
- > Cast Iron Application router
- > Web Services-SOAP/UDDI/XML
- > Automator and WebMethods

A snapshot of benefits for our partners in product companies and end-user organizations is depicted below:

EAI product companies

- > EAI Development Framework experience on multiple EAI products
- > Component development expertise
- > Rich implementation experience of EAI Solutions
- > In depth knowledge across industry verticals
- > Interface development expertise spanning a wide range of enterprise solutions including SAP, Clarify, Tuxedo, Siebel, Clarify, Remedy, Enterprise Portals etc.

EAI end-user organizations

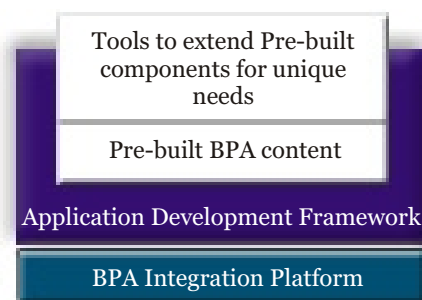

- > Proven competency in EAI implementations
- > Business knowledge across industry verticals
- > End to End solution provider experience

InterraIT EAI Methodology

InterraIT addresses all the core benefits that an EAI product company or its end-user organization would look for in respect of data persistence, asynchronous data transfer, data transformation or multiple interface capabilities. The EAI methodology has been derived based on our experience while executing development and integration projects for our customers. With an aim to enhance speed to market for our clients, InterraIT employs the unique XP software development methodology. As compared to conventional SDLC, the high yield programming system "Xtreme Programming" (XP) enables faster roll out of EAI solutions, thus arming its clients with the much needed speed to market benefit.

In addition, at InterraIT we believe that to maximize returns from an integration initiative a company needs to develop a high level strategy to map business requirements with the integration

centric Business Process Application (BPA) - one which provides pre-built content to make quicker delivery to the market and reduces long-term costs. The BPA suite can also apply to functionalities like screening customer's information and handling business exceptions. It uses an Application Development Framework and BPA Integration Platform so that organizations can leverage their existing resources instead of investing in replacements.

InterraIT has successfully used its EAI solution development methodology to create measurable returns for clients.

Corporate Office

2001 Gateway Place,
Suite-670W, San Jose
CA 95110, USA

Delivery Centers

SDF #E14, NSEZ, Noida
